DESCRIPTION OF FUNCTION

25. This function has a y-intercept at -.25 and three asymptotes.	26. This is an odd function with two non-removable discontinuities: one at x=-3 and one at x=3.
27. This function has a non-removable discontinuity at x=0 and $f(x) = f(-x)$.	28. This function has symmetry with respect to the y-axis. It is continuous on $(-\infty, \infty)$. Its range is $\{y : y < 1\}$.
29. This function has two non-removable discontinuities: one at x = -3 and one at x = 3.	30. For every (x, y) on the graph of $f(x)$, $(-x, -y)$ is on the graph. This function has one non-removable discontinuity.
31. This function is: concave down on $(-\infty, 2)$ and concave up on $(2, \infty)$.	32. The domain of this function is $(-\infty, -2) \cup (2, \infty)$. The range of this function is $\{y: y > 1\}$.
